The 4th in Minimally Invasive Rhinoplasty Techniques — Regensburg 2025:

Dear Colleagues and Friends:

Minimally invasive techniques benefit patient and surgeon alike. Less tissue dissection, measurable preservation of valuable tissues, enhanced recovery and a more benign situation for possible revision procedures. Endonasal approaches, preservation concepts and soft techniques are important elements of minimally invasive rhinoplasty.

The present course combines the Regensburg tradition of endonasal innovations with minimally invasive techniques performed through the open approach.

Presentations will be case – based and evidence based. The program has been designed in collaboration with the Evidence Based Rhinoplasty Research Group (EBRRG) and is under the auspices of EAFPS and RSE.

Topics of focus will include:

- step – by step instruction of endonasal approaches
- presentation of preservation concepts
- surgery under local anaesthesia
- strategies to enhance recovery

During a full day of anatomic dissections you will practice endonasal and minimally invasive rhinoplasty techniques under expert mentoring. Regensburg is one of Germany's most wonderful medieval towns, relaxing yet vibrant. Travel is easy through Munich airport, and excellent hotels are affordable.

The European Course in Face Lift and Rejuvenation Surgery will take place back to back from May 4th to the 6th. Benefit from the opportunity of registering for both courses and maximize you learning experience.
